

# Where Do They Dwell? Purple-Sided WhumpleGumper Habitats

The purpose of this map is to distinguish the habitats of Purple-Sided WhumpleGumpers.

The burrows, paths, and home ranges of these mammals along with agricultural lands and freshwater wetlands are included and investigated in order to make an educated guess as to where they dwell.

I believe that WhumpleGumpers inhabit freshwater wetlands. This conclusion is reached via visual and statistical analyses.

More documented burrows, paths, and home ranges are located in freshwater wetlands, and the ratio of WhumpleGumper burrows to land coverage (acres) is larger for freshwater wetlands than for agricultural lands.
